Different Lids Colors

Our sterilization containers at Victoris come in eight different colors (silver, yellow, red, blue, green, black, bronze and purple) ensuring to easily distinguish between different sets or types of instruments at a glance.

Advantages of Multiple Colors

- Enhanced Organization: Different colors can be used to categorize and organize instruments based on their usage, department, or level of sterilization, reducing the risk of cross-contamination and improving efficiency.
- Easy Identification: Color-coding helps in quickly identifying the contents of each container, saving time and reducing errors in busy environments.
- Improved Workflow: With a clear visual system in place, staff can more easily manage inventory and ensure that the right instruments are always in the right place.

Customized Solutions & Tailored to Your Needs

Victoris sterilization containers are manufactured in 8 main sizes to accommodate various surgical needs: standard sizes (1/1 Full Size, 3/4 Quarter Size, 1/2 Half Size, Mini, Dental and 1/2 Dental Size) are ideal for common instrument sets, while the Wide Body size suits specialized instruments like Bookwalter retractors, and the Long Body size is designed for extended instruments such as robotic arms.

The sterilization containers are crafted in five primary heights to suit a variety of surgical instruments. Additionally, custom sizes or heights can be tailored to meet specific requirements.

BARRIER MODEL

The Barrier Model is an innovative sterilization container designed to ensure maximum safety in CSSD workflows. Its labyrinth structure prevents microorganisms from entering, maintaining sterility for extended periods. This design offers reliable, practical, and scientifically proven protection.

Scientific Foundation

The principle behind the Barrier mechanism traces back to Louis Pasteur's groundbreaking "Swan Neck Flask" experiment in 1862, which challenged the idea of spontaneous generation. Pasteur designed a flask with an S-shaped neck that allowed air to pass freely but trapped dust and microorganisms in its curves. When the broth inside was boiled and left untouched, no microbial growth occurred, clearly proving that life could not emerge without contamination from existing microorganisms. However, once the flask was tilted and the trapped particles reached the broth, microbial growth appeared almost immediately.

The Barrier Model adopts the same principle through its labyrinth-like system. By forcing air to travel through a complex path, it prevents microorganisms and viruses from penetrating the container. This ensures that sterility is maintained, while still allowing necessary airflow. The result is a reliable and scientifically validated protective system, directly inspired by one of the most important experiments in microbiology.

REDUCE. REUSE. RENEW.

Seize Cost Control and Sustainability: Ditch the waste expense and embrace the smart, permanent solution.

VALVE MODEL

Victoris Valve Model sterilization containers are designed with an advanced mechanical valve system that removes the need for disposable filters while delivering stable and reliable performance throughout extended use.

Each valve is precisely engineered with integrated gaskets that ensure smooth operation in response to pressure variations during the sterilization process. The secure closure, supported by high-grade silicone gaskets, provides excellent sealing integrity and long-term durability.

Combining innovative design with practicality, Victoris Valve Model containers offer a sustainable and cost-efficient solution for safe and effective sterilization in healthcare environments worldwide.

EASE WITH COLORS EXCELLENCE IN WORKFLOW

RUNNING PRINCIPLE

At the beginning of the sterilization cycle, the vacuum phase causes the valves to fully open, allowing the evacuation of dry air from the container.

During the sterilization cycle, the pressure-activated valves automatically open under positive pressure, enabling controlled steam penetration for effective sterilization.

Once the process is complete, and no external forces such as vacuum or pressure are present, the entire system remains sealed, preserving the sterility of its contents.
